SUMMARY

Full-stack engineer with six years of experience building and modernizing Ruby on Rails and React applications for clients in insurance, education, and the non-profit sector. Strengths include legacy framework upgrades, search and background-job infrastructure, payment integrations, and containerized deployment pipelines.

EXPERIENCE

Senior Software Developer, ClearStack

Mar 2022 – Present | Bengaluru, India

The Standard Insurance, Electronic Billing Administration | Rails, React, Oracle, PostgreSQL, Docker, Ansible

- Designed a template-driven upload system supporting four file formats (CSV, XLSX, TXT, and XML) that reduced the time required to onboard new employee data feeds by 30 percent.
- Automated file collection from client Samba folders on a 30-minute schedule, reducing manual intervention by 90 percent and flagging failed uploads for follow-up.
- Replaced Sunspot and Solr with Meilisearch for employee search, cutting query response times and adding permission filters, background indexing, health checks, and reindexing tools.
- Migrated background processing from Resque and Whenever to PostgreSQL-backed Solid Queue, then delivered Docker and Kamal deployment on ARM64 servers with worker health checks and managed PostgreSQL, Valkey, and Meilisearch services.

Peer Water Exchange | Rails, Hotwire, React, TypeScript, MySQL, AWS

- Upgraded the platform from Rails 5.2 and Ruby 2.7 to Rails 8 and Ruby 3.4, replacing the legacy asset pipeline with ES modules, Tailwind, and Propshaft, and introducing Docker, Kamal, and SOPS for delivery.
- Delivered a Google Cloud translation feature that made the platform available in eight additional languages, using cached progressive loading to keep pages responsive and an administrator review queue to maintain quality.

ClearStack Platform | Rails 8, Hotwire, PostgreSQL, Azure, Kamal

- Consolidated the public website, blog, careers pages, and internal recruiting pipeline into a single application, supported by continuously built Docker images, managed secrets, automated backups, and rollback tooling.
- Built an AI resume review tool that summarizes candidates, extracts skills, explains job fit, and compares up to four applicants side by side.

Full Stack Developer, eLitmus Evaluation Pvt. Ltd.

Aug 2019 – Feb 2022 | Bengaluru, India

- Launched the gift-card store end to end across five areas: administrator setup, catalogue management, bulk code uploads, checkout, and customer purchases, contributing to measurable sales growth.
- Integrated Razorpay payments for test bookings and gift-card purchases through a single reusable checkout flow.
- Streamlined the registration flow by adding mobile OTP login through the Gupshup API, which improved user retention.
- Developed a campus-hiring dashboard that allowed corporate clients to review candidate profiles and advance applicants through every hiring stage from a single screen.

SKILLS

Application development: Ruby, Rails, Node.js, REST APIs, Sidekiq, React, TypeScript, JavaScript, Hotwire, Next.js

Data and infrastructure: PostgreSQL, MySQL, Oracle, Redis, Valkey, AWS, Azure, Docker, Kamal, Terraform, Ansible, SOPS, CI/CD

Testing and operations: RSpec, Cucumber, Selenium, GitHub Actions, GitLab CI

PROJECTS AND WRITING

CompressKaro: Browser-based PDF and image tools that process files locally, so nothing is ever uploaded. github.com/compresskaro

CronLens: A cron visualizer that explains expressions and previews run times across time zones and daylight saving changes. github.com/cronlens

HookView: A disposable webhook inbox for inspecting headers, query parameters, and JSON payloads. github.com/hookview

Writing: published technical articles on Rails, React, data pipelines, and DevOps. bhupendranegi.github.io/blog

EDUCATION AND RECOGNITION

B.Tech, Computer Science and Engineering, BTKIT, Dwarahat

2015 – 2019

IEEE Xtreme Programming Competition: All India Rank 12 and All India Rank 46.
